AGE-MEDU
Advancing Geriatric Education for Nurses and Techs at High University

AGE-MEDU is an Erasmus+ project aimed at modernising geriatric nursing education to meet the challenges of an ageing population. The project modernises nursing education by using digital tools like VR and focusing on sustainability, helping nurses provide better care for older adults, especially those with complex conditions like dementia.

Implemented in Croatia, the Netherlands, Portugal, and Greece, AGE-MEDU develops innovative teaching materials, strengthens educators' digital skills, and offers policy recommendations to align education with labour market demands.

As Europe's population ages, preparing nurses to meet the evolving needs of older adults has never been more important. AGE-MEDU is helping shape the future of nursing education through innovative learning approaches that equip future professionals to deliver better care, including for people living with dementia.

In this newsletter, we are pleased to share the project's main results and achievements, highlighting the work carried out to improve nursing education.

These include research into existing training needs and gaps, recommendations for updating curricula, the development of a new nursing programme, and innovative digital learning resources.

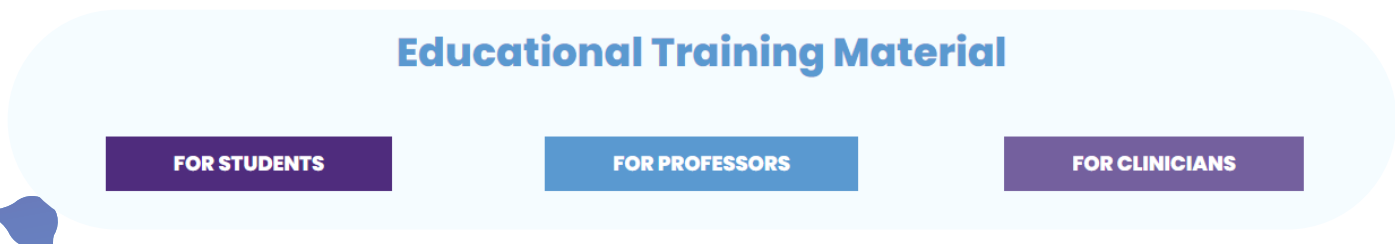

The project also promotes the use of virtual reality for immersive, scenario-based learning and supports teachers and external lecturers in strengthening their digital competences, contributing to more modern, inclusive and sustainable nursing education.

Project main results:

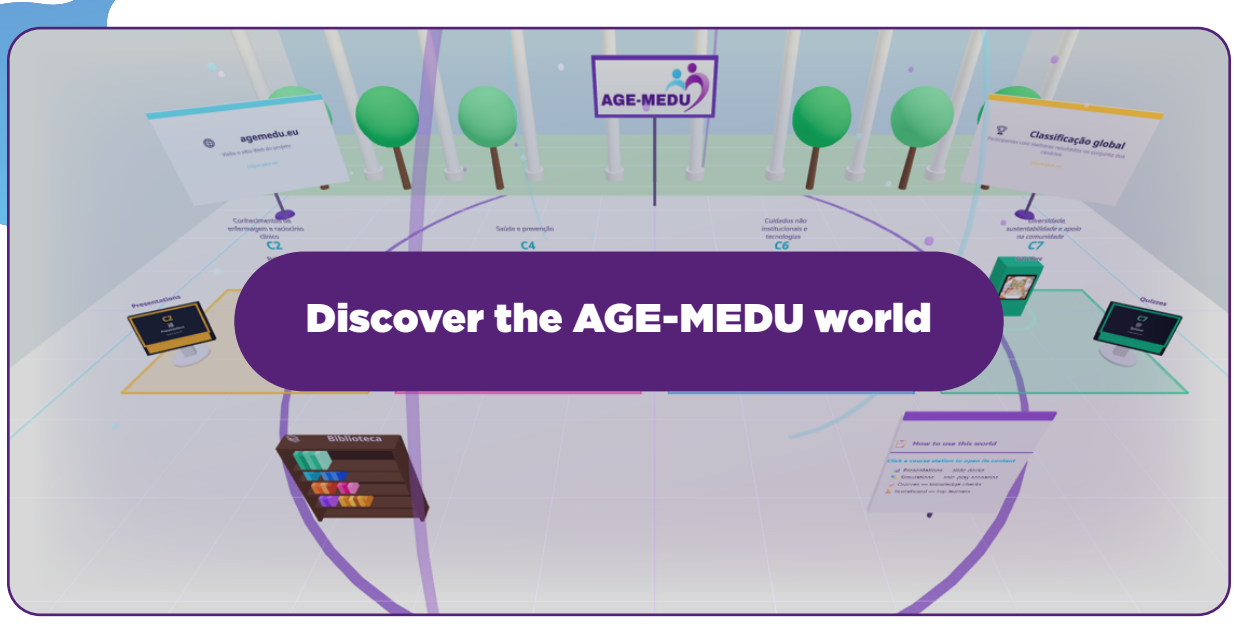

New nursing programme and Innovative digital learning resources

Virtual reality
